A PERSONAL LETTER

A Note from Monique

Hi, I'm Monique, a Florida-licensed esthetician with over 10 years of experience helping clients care for and understand their skin.

Through my own personal skin struggles and challenges, I've learned that true skin wellness starts from within. The **14-Day Gut + Skin Wellness Reset** was created from my personal journey, continued education, and the hands-on experience I've gained working with clients in the treatment room.

My prayer is that everyone who purchases this guide and puts it into practice learns how to better care for themselves from the inside out, while also feeling confident in the skin they're in.

My mission has always been to help others **love their skin from within**, and I believe that nourishing your body with proper nutrition and intentional food choices is an important part of that journey.

This guide is a starting point to help you build healthier, more mindful habits that support your overall wellness and your skin.

When you begin taking care of yourself from the inside, everything else can begin to follow, including healthier, more radiant-looking skin.

With love,

Monique Alysia

Love Your Skin by Monique Alysia

PLEASE READ FIRST

A Gentle Wellness Note

This guide is intended for general wellness and educational purposes only and is based on my personal experiences, education, and professional experience as an esthetician.

It is not intended to diagnose, treat, cure, or prevent any disease or medical condition, and it is not a substitute for personalized medical or nutritional advice.

Everyone's body and nutritional needs are different. Please listen to your body and speak with your doctor, registered dietitian, or other qualified healthcare professional before making significant changes to your diet, especially if you are pregnant or breastfeeding, have a medical condition, have food allergies or sensitivities, have a history of an eating disorder, or take medications.

If you have persistent abdominal pain, vomiting, blood in your stool, unexplained weight loss, severe diarrhea or constipation, or other concerning symptoms, seek medical care rather than attempting a dietary reset.

The carnivore-style option in this guide is intentionally presented as a dietary preference option, not as a medically proven gut-healing protocol. Because it excludes plant foods, it does not provide the dietary fiber found in fruits, vegetables, legumes, nuts, seeds, and whole grains.

Take what serves you, move at your own pace, and remember:

Wellness is a journey, not perfection.

With love, Monique Alysia

THE FOUNDATION

What Does “Gut + Skin Wellness” Mean?

Your digestive system and the microorganisms that live within it interact with the foods you eat, your metabolism, immune system, and many other aspects of health.

Research suggests that dietary patterns emphasizing minimally processed foods and adequate dietary fiber can influence the gut microbiome. Different types of fiber can affect people differently, so more fiber is not necessarily better for everyone at every moment.

For skin, nutrition is one piece of the bigger picture. A balanced diet provides nutrients such as vitamin C, vitamin A, essential fats, and other nutrients involved in normal skin function.

Some research also suggests that lower-glycemic eating patterns may help some people with acne, although more research is needed and diet does not replace appropriate dermatologic care.

THIS RESET FOCUSES ON

- ◆ Minimally processed foods
- ◆ Fruits and vegetables
- ◆ Fiber-rich foods when tolerated
- ◆ Quality protein
- ◆ Healthy fats
- ◆ Omega-3-rich seafood
- ◆ Fermented foods when tolerated
- ◆ Reducing added sugar
- ◆ Reducing heavily processed foods
- ◆ Mindful eating
- ◆ Hydration
- ◆ Consistency

KEEP IT SIMPLE

Your 14-Day Reset Rules

For the next 14 days, keep things simple.

01 Build your meals around real food.

Choose foods that are as close to their natural form as practical.

02 Include protein at meals.

Protein helps make meals satisfying and provides amino acids needed throughout the body.

03 Eat colorful plants when your chosen eating style allows them.

Think: Green + Red + Orange + Purple + Yellow. The more variety you can comfortably tolerate, the more diverse your food intake becomes.

04 Choose healthy fats.

Examples include avocado, extra-virgin olive oil, nuts, seeds, fatty fish, and olives.

05 Limit added sugar.

For these 14 days, minimize sugary sodas, sweet tea, candy, doughnuts, pastries, highly sweetened cereals, sugary coffee drinks, and excessive desserts.

YOUR 14-DAY RESET RULES, CONTINUED

06 Reduce ultra-processed foods.

You don't have to be perfect. The goal is simply to make whole and minimally processed foods the foundation of your meals.

07 Eat slowly.

Put your fork down between bites. Chew thoroughly. Give yourself time to notice when you're becoming satisfied.

08 Hydrate consistently.

Drink water throughout the day according to your body's needs and any guidance from your healthcare professional.

09 Don't force foods that make you feel unwell.

A food that is considered healthy can still be poorly tolerated by an individual.

10 Don't chase perfection.

One meal does not make or break your wellness. Simply return to the plan at your next meal.

One meal does not make or break your wellness.

EVERY DAY

Your Daily Wellness Check-In

EACH MORNING, ASK YOURSELF

How do I feel today?

Rate each area from 1 (low) to 5 (wonderful).

Energy	1	2	3	4	5
Digestion	1	2	3	4	5
Mood	1	2	3	4	5
Sleep	1	2	3	4	5
Skin	1	2	3	4	5

AT NIGHT

What did my body enjoy today?

Did anything seem to trigger bloating, discomfort, or other symptoms?

What am I grateful for today?

Tip: each day of the meal plan includes a space for this check-in, so you can print the pages and keep everything in one place.

How to Use This Plan

Vegetarian

Vegetarian

Pescatarian

Carnivore-Style

- ◆ You can repeat meals.
- ◆ You do not need expensive ingredients.
- ◆ You do not need complicated recipes.

The goal is to make healthy choices simple enough to continue.

DAY 01 OF 14

Reset + Restart

01

VEGETARIAN

BREAKFAST

Greek yogurt or unsweetened coconut yogurt, blueberries, chia seeds, walnuts

LUNCH

Quinoa bowl: spinach, cucumber, avocado, chickpeas, olive oil + lemon

SNACK

Apple + almond butter

DINNER

Roasted sweet potato, steamed broccoli, lentils, avocado

DAILY FOCUS

Begin slowly. Drink water consistently and pay attention to how your body feels.

PESCATARIAN

BREAKFAST

2 eggs, avocado, sautéed spinach, berries

LUNCH

Salmon bowl: quinoa, cucumber, spinach, avocado, olive oil + lemon

SNACK

Apple + walnuts

DINNER

Grilled cod, roasted sweet potato, broccoli, side salad

DAILY FOCUS

Start with simple, minimally processed foods.

CARNIVORE-STYLE

BREAKFAST

Eggs, ground beef or steak

LUNCH

Grilled chicken thighs, salt to taste

SNACK

Hard-boiled eggs

DINNER

Grass-fed beef burger patties, eggs if desired

DAILY FOCUS

Keep meals simple and monitor how you feel.

NOTES & GRATITUDE

DAY 14 COMPLETE

You Made It!

Fourteen days.

Fourteen opportunities to make a different choice.

Fourteen days of learning to pay attention to your body.

BUT REMEMBER

The goal was never perfection.

The goal was awareness.

The goal was learning.

The goal was building habits you can continue.

YOUR SHOPPING GUIDE

The “Gut-Friendly” Food List

 PLANT FOODS

Vegetables

Spinach

Kale

Broccoli

Cauliflower

Asparagus

Carrots

Bell peppers

Cucumbers

Zucchini

Sweet potatoes

Squash

Green beans

Tomatoes

Mushrooms

Fruits

Blueberries

Strawberries

Raspberries

Blackberries

Apples

Pears

Kiwi

Oranges

Avocado

Fiber-rich foods

Oats

Quinoa

Brown rice

Lentils

Chickpeas

Black beans

Chia seeds

Flaxseed

Nuts

Seeds

MY SHOPPING LIST

Fiber is an important part of a healthy dietary pattern, although individual tolerance varies. Adults are generally advised to consume approximately 22–34 grams of fiber daily depending on age and sex. If increasing fiber, doing so gradually may reduce gas and bloating.

THE "GUT-FRIENDLY" FOOD LIST

Protein Choices

VEGETARIAN PROTEINS

- ◆ Eggs
- ◆ Greek yogurt
- ◆ Cottage cheese
- ◆ Lentils
- ◆ Chickpeas
- ◆ Black beans
- ◆ Edamame
- ◆ Tofu
- ◆ Tempeh
- ◆ Quinoa
- ◆ Nuts
- ◆ Seeds

PESCATARIAN PROTEINS

- ◆ Salmon
- ◆ Sardines
- ◆ Cod
- ◆ Tuna
- ◆ Shrimp
- ◆ Trout
- ◆ Eggs
- ◆ Greek yogurt
- ◆ Cottage cheese
- ◆ Beans
- ◆ Lentils
- ◆ Chickpeas

Fatty fish such as salmon and sardines can provide omega-3 fatty acids while also providing protein.

CARNIVORE-STYLE PROTEINS

- ◆ Beef
- ◆ Steak
- ◆ Ground beef
- ◆ Chicken
- ◆ Turkey
- ◆ Eggs
- ◆ Salmon
- ◆ Sardines
- ◆ Tuna
- ◆ Other fish and seafood
- ◆ Plain meat broths

IMPORTANT

The carnivore-style approach excludes or severely restricts plant foods and therefore excludes most dietary fiber. It should not be marketed as a proven treatment for gut disorders or as inherently superior for gut health.

If digestive symptoms are the reason someone is considering carnivore, they should speak with a physician or registered dietitian before making a major dietary restriction.

Fermented Foods

Depending on your eating style and tolerance, consider small portions of:

- Fermented foods can contain microorganisms, but not every fermented food qualifies as a food containing a probiotic with demonstrated health benefits.

Start small. More is not necessarily better.

FOR 14 DAYS

Foods to Minimize

Instead of creating a long list of “bad foods,” think:

LESS OF

- ◆ Sugary beverages
- ◆ Excess added sugar
- ◆ Highly processed snacks
- ◆ Excessive fried foods
- ◆ Frequent fast food
- ◆ Highly refined grains
- ◆ Excessive alcohol
- ◆ Constant grazing / snacking
- ◆ Foods you know personally trigger digestive symptoms

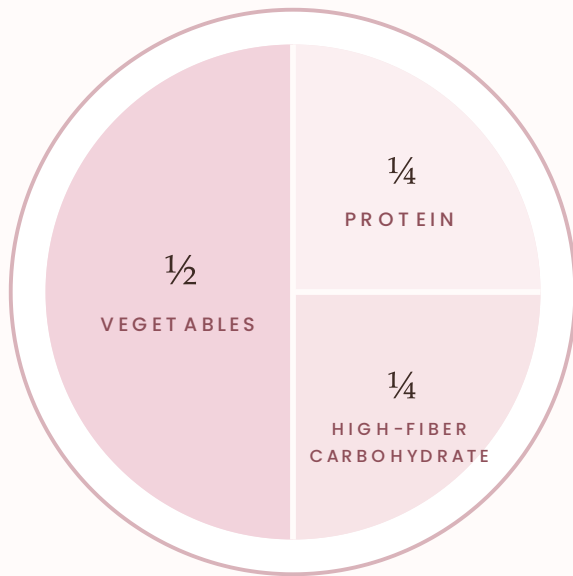

MORE OF

- ◆ Vegetables
- ◆ Fruits
- ◆ Quality protein
- ◆ Fiber-rich foods when tolerated
- ◆ Healthy fats
- ◆ Water
- ◆ Minimally processed foods
- ◆ Mindful meals

A SIMPLE FORMULA

The Skin-Supporting Plate

For the vegetarian and pescatarian versions, use this simple formula:

1/2 plate Vegetables

1/4 plate Protein

1/4 plate High-fiber carbohydrate

Add Healthy fat

FOR EXAMPLE

*Salmon + broccoli + sweet potato
+ avocado*

*Lentils + spinach + quinoa +
avocado*

This approach makes healthy eating easier without requiring calorie counting.

BEYOND THE PLATE

Your Morning & Evening Routine

Morning

STEP 1 · WAKE UP

Take a moment before reaching for your phone. Breathe. Pray. Set an intention for the day.

STEP 2 · HYDRATE

Drink water according to your personal needs.

STEP 3 · MOVE

Take a short walk, stretch, or perform gentle movement if appropriate for you.

STEP 4 · EAT MINDFULLY

Choose your planned breakfast. Don't rush.

Evening

- 1 Finish your evening meal without rushing.

- 2 Take a gentle walk if comfortable.

- 3 Prepare tomorrow's food.

- 4 Put your phone away before bed when possible.

- 5 Write down one thing you're grateful for.

- 6 Get adequate sleep.

Your wellness routine is bigger than food.

BEYOND THE PLATE

Stress, Movement & Rest

Adequate daily movement and rest are key to sustainability.

Food is only one part of loving your skin from within. Stress, movement, and rest all shape how you feel, and they can show up in your skin, too. These habits are what make the rest of this reset last.

Manage Stress

You can't remove every stressor, but you can choose how you care for yourself.

- ◆ Take a few minutes of slow, deep breathing when you feel tense.
- ◆ Pray, journal, or sit in quiet reflection.
- ◆ Step outside for fresh air and natural light.
- ◆ Set gentle limits on screens and social media.

Move Daily

Movement doesn't have to be intense to count. Consistency matters most.

- ◆ Take a short walk, especially after meals.
- ◆ Stretch in the morning or before bed.
- ◆ Aim for about 150 minutes of moderate activity each week, if appropriate for you.
- ◆ Add strength exercises about 2 days a week.

Rest Well

Your body repairs itself while you rest, and your skin does too.

- ◆ Most adults need 7 or more hours of sleep each night.
- ◆ Keep a consistent bedtime and wake time.
- ◆ Wind down with a calming evening routine.
- ◆ Keep your bedroom cool, dark, and quiet.

MY DAILY BALANCE

☐ I took a moment to breathe

☐ I moved my body

☐ I rested without guilt

☐ I slept 7+ hours

If stress, anxiety, or sleep problems feel overwhelming or last for weeks, please reach out to your doctor or a licensed mental health professional.

My 14-Day Reflection

BEFORE I STARTED

My energy felt:

My digestion felt:

My skin felt:

My eating habits were:

AFTER 14 DAYS

I noticed:

My energy:

My digestion:

My skin:

The foods I enjoyed most:

The habits I want to continue:

MY COMMITMENT

My “Love My Skin From Within” Promise

I promise to be more intentional about the way I nourish my body.

I will listen to my body instead of comparing it to someone else's.

I will choose progress over perfection.

I will give myself grace.

I will nourish myself with foods that support my individual needs.

I will remember that wellness is not about restriction. It is about learning to care for myself.

I will continue to love my skin from within.

SIGNED

DATE

WHAT COMES NEXT

After the 14 Days

Don't feel like you have to start another restrictive diet.

Instead, take what you learned and build your own sustainable routine.

ASK YOURSELF

What foods made me feel energized?

What foods felt good in my digestion?

What foods didn't agree with me?

What meals were easy enough to repeat?

What habits can I realistically maintain?

Your next goal is not another reset.

Your next goal is consistency.

WITH LOVE

A Final Word from Monique

Your skin deserves care.

Your body deserves nourishment.

Your mind deserves rest.

And your wellness deserves patience.

You don't have to change everything overnight.

Start with one meal.

One glass of water.

One walk.

One intentional choice.

Then do it again tomorrow.

Because loving your skin from within isn't about becoming perfect. It's about becoming more intentional about caring for the body you've been given.

Nourish your body. Nurture your wellness.

Love your skin from within.

With love,

Monique Alysia

Love Your Skin by Monique Alysia

PART TWO

Understanding Your Nutrients

Vitamins, Minerals & Gut-Supportive Nutrients

Food is the foundation of wellness. A colorful, varied diet can provide many of the vitamins, minerals, fiber, protein, healthy fats, and other nutrients your body needs.

For some people, however, dietary supplements may be appropriate because of dietary patterns, life stage, limited food variety, certain medical conditions, medication use, or a documented nutrient deficiency.

Supplements are not automatically better simply because they contain more. The goal is to understand what your body needs and work with a qualified healthcare professional when supplementation is appropriate.

VITAMINS

Vitamin A

WHY YOUR BODY NEEDS IT

- ◆ Normal vision
- ◆ Immune function
- ◆ Normal growth and development
- ◆ Cell growth and differentiation
- ◆ Normal maintenance of organs and tissues

FOOD SOURCES

Plant sources

Carrots

Sweet potatoes

Spinach

Kale

Pumpkin

Winter squash

Animal sources

Eggs

Dairy

Liver

Vitamin A comes from both animal foods and plant foods containing provitamin A carotenoids such as beta-carotene.

What can happen with deficiency?

Vitamin A deficiency is uncommon in the United States but can affect vision, particularly the ability to see in low light. More severe deficiency can affect the eyes and immune function.

WELLNESS REMINDER

More vitamin A is not necessarily better. Because preformed vitamin A can accumulate in the body, high-dose supplementation can be harmful. Pregnant individuals should be especially careful with high-dose preformed vitamin A.

Food first: Think colorful vegetables and nutrient-dense foods before reaching for a high-dose supplement.

MY NOTES

VITAMINS

Vitamin C

WHY YOUR BODY NEEDS IT

- ◆ Collagen production
- ◆ Normal wound healing
- ◆ Immune function
- ◆ Iron absorption from plant foods
- ◆ Antioxidant activity

FOOD SOURCES

Oranges

Grapefruit

Strawberries

Kiwi

Bell peppers

Broccoli

Tomatoes

Brussels sprouts

What can happen with deficiency?

Severe vitamin C deficiency can cause scurvy. Symptoms can include fatigue, bleeding or swollen gums, poor wound healing, joint pain, and skin changes.

SKIN CONNECTION

Vitamin C is required for collagen biosynthesis and is involved in immune function, making adequate vitamin C an important part of overall nutritional support for normal skin and connective-tissue function.

Food first: Add colorful fruits and vegetables to your meals regularly.

MY NOTES

VITAMINS

Vitamin E

WHY YOUR BODY NEEDS IT

Vitamin E is a fat-soluble antioxidant that helps protect cells from oxidative damage. It also plays roles in:

- ◆ Immune function
- ◆ Cell signaling
- ◆ Gene regulation
- ◆ Other metabolic processes

FOOD SOURCES

Almonds

Sunflower seeds

Hazelnuts

Peanuts

Avocado

Spinach

Vegetable oils

What can happen with deficiency?

Vitamin E deficiency is rare in healthy people. It is more likely in people with certain conditions that interfere with fat absorption.

Deficiency can affect the nervous system, muscles, vision, and immune function.

WELLNESS REMINDER

High-dose vitamin E supplementation is not something everyone needs and can increase bleeding risk at high doses. Speak with your healthcare professional before taking high-dose vitamin E, particularly if you take medications that affect blood clotting.

MY NOTES

VITAMINS

B Vitamins

B vitamins work together in many processes throughout the body, including energy metabolism, nervous-system function, red blood cell formation, and DNA synthesis.

YOUR B-VITAMIN FAMILY

B1

Thiamin

B2

Riboflavin

B3

Niacin

B5

Pantothenic acid

B6

Pyridoxine

B7

Biotin

B9

Folate

B12

Cobalamin

FOOD SOURCES

Depending on the specific B vitamin, sources include:

Whole grains

Beans

Lentils

Nuts

Seeds

Leafy greens

Eggs

Dairy

Fish

Meat

Fortified foods

B12 DESERVES SPECIAL ATTENTION

Vitamin B12 supports normal blood and nerve cells and DNA synthesis. People who eat little or no animal food may have a greater risk of inadequate B12 intake unless they regularly consume fortified foods or supplements containing B12. Certain medications and gastrointestinal conditions can also interfere with B12 absorption.

B12 deficiency can cause anemia and neurological problems. Because symptoms can have many causes, they should not be used to self-diagnose a deficiency.

Talk with your healthcare professional about whether B12 testing or supplementation is appropriate for you.

MY NOTES

MINERALS

Iron

WHY YOUR BODY NEEDS IT

Iron is essential for hemoglobin, the protein in red blood cells that carries oxygen from the lungs to tissues. Iron also supports:

- ◆ Muscle metabolism
- ◆ Normal growth
- ◆ Neurological development
- ◆ Cellular function
- ◆ Production of certain hormones

FOOD SOURCES

Heme iron

Beef

Poultry

Seafood

Non-heme iron

Lentils

Beans

Spinach

Tofu

Pumpkin seeds

Fortified cereals

Tip: Vitamin C can increase absorption of non-heme iron from plant foods.

Who may be at greater risk?

Iron needs can be higher during certain life stages, including menstruation and pregnancy.

Vegetarians may also need to pay particular attention to iron because plant foods contain non-heme iron, which is absorbed differently from heme iron.

IMPORTANT

Do not automatically supplement with iron. Too much iron can be harmful, and iron supplements can interact with certain medications and conditions.

If you suspect you may have low iron, ask your healthcare professional whether blood testing is appropriate.

MY NOTES

VITAMINS

Vitamin D

WHY YOUR BODY NEEDS IT

Vitamin D can come from food, sunlight, and supplements. It supports:

- ◆ Bone health
- ◆ Calcium absorption
- ◆ Muscle function
- ◆ Normal immune function

FOOD SOURCES

Fatty fish

Egg yolks

Fortified milk

Fortified plant milks

Fortified foods

What can happen with deficiency?

Vitamin D deficiency in adults can contribute to osteomalacia, which can cause bone pain and muscle weakness.

WELLNESS REMINDER

The only reliable way to determine whether your vitamin D level is low is through appropriate evaluation, often including a blood test. High doses of vitamin D supplements can also be harmful.

Don't assume you need a high-dose vitamin D supplement simply because you spend little time in the sun. Talk with your healthcare professional.

MY NOTES

MINERALS

Magnesium

WHY YOUR BODY NEEDS IT

Magnesium is involved in more than 300 enzyme systems throughout the body. It supports:

- ◆ Muscle function
- ◆ Nerve function
- ◆ Energy production
- ◆ Protein synthesis
- ◆ Blood glucose regulation
- ◆ Bone development
- ◆ Normal heart rhythm

FOOD SOURCES

Pumpkin seeds

Chia seeds

Almonds

Cashews

Spinach

Black beans

Whole grains

Avocado

What can happen with deficiency?

Early signs can include loss of appetite, nausea, vomiting, fatigue, and weakness. More severe deficiency can cause muscle cramps, numbness, abnormal heart rhythms, and other serious symptoms. Symptomatic deficiency from diet alone is uncommon in otherwise healthy people.

WELLNESS REMINDER

High doses of supplemental magnesium can cause diarrhea, nausea, and abdominal cramping. People with impaired kidney function need particular caution.

MY NOTES

MINERALS

Zinc

WHY YOUR BODY NEEDS IT

- ◆ Immune function
- ◆ Wound healing
- ◆ Protein synthesis
- ◆ DNA synthesis
- ◆ Cell division
- ◆ Normal growth and development

FOOD SOURCES

Oysters

Beef

Seafood

Poultry

Eggs

Dairy

Pumpkin seeds

Beans

Lentils

Nuts

What can happen with deficiency?

Zinc deficiency can affect many body systems. Possible effects include loss of appetite, changes in taste or smell, delayed wound healing, hair loss, and frequent infections. However, these symptoms can have many causes and should not be used to diagnose deficiency on their own.

IMPORTANT

Taking very high amounts of zinc for extended periods can interfere with copper absorption and contribute to copper deficiency. More is not better.

MY NOTES

MINERALS

Copper

WHY YOUR BODY NEEDS IT

- ◆ Iron metabolism
- ◆ Energy production
- ◆ Connective tissue formation
- ◆ Nervous-system function
- ◆ Immune function
- ◆ Normal pigmentation
- ◆ Antioxidant defense

FOOD SOURCES

Shellfish

Nuts

Seeds

Whole grains

Beans

Dark chocolate

Organ meats

What can happen with deficiency?

Copper deficiency is uncommon. Possible effects can include anemia, low white blood cell counts, changes in pigmentation, bone abnormalities, problems with coordination, and increased risk of infection.

IMPORTANT ZINC CONNECTION

Long-term use of high-dose zinc supplements can interfere with copper absorption and contribute to copper deficiency. This is one reason it is important not to take large doses of individual nutrients without professional guidance.

MY NOTES

GUT-SUPPORTIVE NUTRIENTS

Probiotics

WHAT ARE PROBIOTICS?

Probiotics are live microorganisms that, when taken in adequate amounts, provide a health benefit to the person consuming them.

THEY CAN BE FOUND IN

- ◆ Some yogurts
- ◆ Some fermented foods
- ◆ Certain dietary supplements

FOOD SOURCES

Depending on the product

Yogurt with live cultures

Kefir

Some fermented vegetables

Kimchi

Sauerkraut

However, not every product labeled “probiotic” has proven health benefits. Different probiotic strains can have different effects, so choosing a product based solely on a high CFU number isn’t enough.

A NOTE ABOUT YOUR GUT

Your gut microbiome is complex. Taking a probiotic does not automatically mean that you are “fixing” or “healing” your gut.

Think of probiotics as one possible tool, not a requirement for everyone.

MY NOTES

GUT-SUPPORTIVE NUTRIENTS

Prebiotics

WHAT ARE PREBIOTICS?

Prebiotics are substances, often certain types of carbohydrates, that microorganisms in the gastrointestinal tract can use as fuel.

COMMON PREBIOTIC-CONTAINING FOODS

Onions

Garlic

Leeks

Asparagus

Bananas

Oats

Beans

Chickpeas

Lentils

Jerusalem artichokes

START SLOWLY

Some prebiotic-rich foods can increase gas or bloating, especially when someone suddenly increases their fiber intake.

If you are not accustomed to eating a lot of fiber, increase your intake gradually and drink adequate fluids.

Listen to your body.

MY NOTES

Probiotics + Prebiotics

Helpful microorganisms

*Fuel that certain
microorganisms can use*

Food, dietary pattern, individual health status, and the specific strain or product all matter.

BEFORE YOU SUPPLEMENT

Food First

Before reaching for a supplement, ask: “Can I get this nutrient from food?”

Spinach

→ magnesium, folate

Avocado

→ magnesium and other nutrients

Berries

→ vitamin C and plant compounds

Carrots

→ provitamin A carotenoids

Nuts and seeds

→ vitamin E, magnesium, zinc, copper

Salmon

→ vitamin D, protein, omega-3 fats

Eggs

→ protein and several micronutrients

Beans and lentils

→ iron, magnesium, folate, fiber

Broccoli

→ vitamin C, folate, fiber

MY NOTES

Supplements can have a role, but they should complement, not automatically replace, a nourishing dietary pattern.

BE INFORMED

A Simple Supplement Checklist

Before starting a new supplement:

- ☐ Do I know why I want to take it?
- ☐ Can I get this nutrient from food?
- ☐ Have I discussed it with my healthcare professional?
- ☐ Am I taking any medications?
- ☐ Could this supplement interact with my medications?
- ☐ Am I already getting this nutrient from a multivitamin or another supplement?
- ☐ Do I actually need a high dose?
- ☐ Have I checked the Supplement Facts label?
- ☐ Is the product from a reputable manufacturer?
- ☐ Am I taking more than one product containing the same nutrient?

MY SUPPLEMENT NOTES

More supplements do not automatically equal better health.

YOUR HEALTH TEAM

When to Talk to Your Doctor

Speak with your healthcare professional before starting supplements or making significant dietary changes if you:

- | | |
|---|---|
| ◆ Are pregnant or breastfeeding | ◆ Take prescription medications |
| ◆ Have a medical condition | ◆ Take several supplements |
| ◆ Have kidney or liver disease | ◆ Are preparing for surgery |
| ◆ Have a gastrointestinal disorder | ◆ Have unexplained symptoms |
| ◆ Have a history of nutrient deficiencies | ◆ Are considering high-dose supplementation |

Some vitamins and minerals can interact with medications or become harmful at excessive doses.

QUESTIONS FOR MY PROVIDER

YOUR PERSONAL NUTRIENT CONVERSATION

Before purchasing a supplement, consider asking your healthcare professional:

"Do I need this nutrient?"

"Should I have my level tested?"

"What dose is appropriate for me?"

"How long should I take it?"

"Could it interact with anything I'm currently taking?"

"Can I meet my needs through food instead?"

A REMINDER

The Love Your Skin From Within Reminder

Beautiful skin isn't created by one supplement.

It isn't created by one food.

And it certainly isn't created by perfection.

Your skin is influenced by many factors, including genetics, hormones, environment, skincare, sleep, stress, lifestyle, and nutrition.

Your goal is not to find a magic pill.

Your goal is to create a lifestyle that consistently supports your overall wellness.

Nourish your body. Care for your mind. Protect your skin.

Listen to your body. And love your skin from within.

*An esthetics practice rooted in self-love, community,
education, and results.*
